

In the Specification

Please replace the paragraph beginning on line 10 of page 10 with the following re-written paragraph.

The control circuit 18 subdivides the right half of the upper side into several sections [[281 to 284]] 28₁ to 28₄. In the Figure, these sections are separated from each other and from the left-hand half of the upper side by dashed lines, but these lines only serve as an orientation for the viewer; in the real back-short 30, they do not exist. The control circuit 18 recognizes a working frequency of the back-short from in which of the sections [[281 to 284]] 28₁ to 28₄ the bore 26 is located (section [[283]] 28₃ in the present case).
